

Barrel Holder

STEP Offshore's barrel holder is designed for safe storage of barrels. The barrels are placed on a tilted grating to ensure total emptying. The unit also includes a drip tray to prevent spillage of chemicals to the environment. The unit is designed to meet all relevant offshore requirements regarding health, safety and environment.

STEP Offshore AS is a competitive and focused supplier of high quality systems for drilling fluid applications to offshore oil and gas projects world wide.

We shall provide an effective and efficient project management and supply our clients with the highest quality products the industry has to offer.

This product flyer covers our standard unit. We will also, on request, offer a wide range of variations and project specific adaptations in order to best suit our clients needs and requirements.
